

Business Case - IMS Project EC

Benefits	Benchmarks	Risks
This project allows me to display what I have learned so far	A fully functional project will be able to demonstrate this	Without revision and diligent studying, I risk not being able to fully complete the project
Learning how to combine two different technologies: Java & MySQL	Rigorous testing with >80% coverage will ensure proper implementation	There is always the risk a GCP instance could have technical difficulty
Working in a time-constrained manner has the benefit of pushing me to develop	Using the end of each week until the project deadline to update Jira and keep it up to date to measure progress.	The risk is that without proper planning, this has the potential to be a stressful endeavour
